

SONAXIS

- Sonaxis was founded in 2002 in Besançon, the French capital of microtechniques, and was awarded the national prize for **innovative start-up companies** that same year.
- Since then, thanks to our high quality **piezo-composite ultrasound probes**, we have become a major player in the field of **NDT** and supply a large number of customers in the aeronautics, aerospace, car, steel, oil, nuclear and energy industries.
- We now are a growing, quick to react SME and support our customers in their projects thanks to our **own designers and workshop**. We have specialized in manufacturing and distributing specific custom-made probes for a wide range of uses.
- Our commitment to quality leads us to work according to the **ISO 9001: 2015 standard**.
- Our main product categories are as follows:
 - **The ultrasound piezo-composite transducers**
 - **The ultrasound linear (1D) phased array transducers**
 - **The ultrasound matrix (2D) phased array transducers**
 - **The ultrasound high frequency transducers.**
- Our purpose for the coming years is to strengthen our **research and development** in order to provide our customers with **advanced technology ultrasound probes** and high quality services.
